The tool Task Dragon seems practical and easy to use. On MacOS, however, some button clicks were not registered properly and i had to click several times for the program to notice what i wanted to do. Further, it would be nice to be able to add any STRIDE attack to any entity on screen, instead of limiting which ones can go where. All together, while i like the workflow Threat Dragon provides, i would rather look for a similar tool that fits my needs a little better.
